

Conquer

Asset Specifications & Sprite Reference Guide
Version 1.0 — May 2026

This document defines all visual assets required for Conquer. It specifies pixel dimensions, file formats, quantity per category, and provides AI-generation prompts for both static sprites and short looping monster animations. Use this as the single reference for asset production — every sprite mentioned here corresponds to a concrete in-game element defined in SPEC.md.

Production order recommendation: start with terrain (1 day), then 1 sample monster + 1 building (1 day) — verify the visual style works in-engine. Then expand category by category. Don't try to generate all 330 sprites in one batch — iterate per category.

1. Map Design Philosophy

Top-Down 2D Tile Map

Conquer uses a classic **top-down 2D quadratic tile grid** rendered via HTML5 Canvas 2D. This is the standard format for browser-based strategy MMOs (Tribal Wars, League of Kingdoms, OGame).

Why this format:

Format	Pro	Con
Top-Down 2D (chosen)	Click-detection trivial; zoom works cleanly; less visual depth than isometric	Less visual depth than isometric; more players
Isometric	More visual depth; richer aesthetic	Each sprite needs 4 rotations; Math complex; harder response
Hex Tiles	Natural movement; strategic feel	Distance math complex; 2x2 footprints awkward; non-standard

Tile Size: 64×64 pixels

Standard for browser strategy games. Reasoning:

Aspect	Value	Effect
Map size	1024 × 1024 tiles	Full world: 65,536 × 65,536 px
Visible tiles on 1920×1080	~30 horizontal	Good strategic overview
Visible tiles on phone	~6 horizontal (with zoom-out: ~12)	Mobile-playable
Zoom levels	1× / 2× / 4× / 8×	32 / 64 / 128 / 256 px effective
File size per terrain tile	~2-4 KB PNG	~200 KB total per terrain set

Tile alignment: world-coordinate (x, y) where x = horizontal, y = vertical, origin (0, 0) at top-left. A player city anchored at (x, y) occupies tiles (x, y), (x+1, y), (x, y+1), (x+1, y+1). Shrines occupy 4×4 footprints.

2. Sprite Size Reference

All sprites must use these standard dimensions. Inconsistent sizing breaks the map renderer. PNG-32 with transparency.

Element	Dimensions	Footprint	Notes
Terrain Tile	64 × 64 px	1×1 tile	Tilable at edges; transitions for adjacent terrain
Field Object (Resource Mine, etc.)	64 × 64 px	1×1 tile	1 sprite per type × 3 visual tiers
Standard Monster (map)	64 × 64 px	1×1 tile	Orc, Skeleton, Golem, Goblin, Deathkarr
Dragon (map)	96 × 96 px	Overlaps adjacent tiles	Usually larger to signal danger
Magdar (map)	128 × 128 px	Overlaps 2×2 area	Largest map sprite
Player City	128 × 128 px	2×2 tiles	4 visual tiers (L1-5, 6-15, 16-25, 26-30)
Shrine (C/B/A)	256 × 256 px	4×4 tiles	Single design per tier
Congress (S)	256 × 256 px	4×4 tiles	Centerpiece of map
Battle Sprite (Monster)	256 × 256 px (Std) 384 × 384 px (Drachen) 512 × 512 px (Magdar)	Battle screen	Used in battle reports only
Battle Sprite (Troop)	128 × 128 px	Battle screen	5 troops × 3 types
Treasure Icon	128 × 128 px	UI	77 unique designs across 5 grades
Charm Icon	96 × 96 px	UI	24 designs (8 stats × 3 grades)
Building Icon (City View)	192 × 192 px	City screen	13 buildings × 4 visual tiers
Resource Icon	32×32 + 64×64 px	UI	Both sizes for HUD and detail views
Action Button Icon	64 × 64 px	UI	Build, Research, Attack, etc.
VIP Crown Icon	64 × 64 px	UI	20 levels (or 4 tiers)
Speedup Icon	64 × 64 px	UI	Build/Research/Train/Recover/Generic

3. Terrain Tiles

Terrain forms the visual base layer. Every map tile has a terrain background. Transitions between adjacent terrain types must be smooth (no harsh edges).

Terrain	Variants	Total	Notes
Plains (default)	4 grass variations	4	Most common, ~50% of map
Forest	4 density variations	4	Lumber-rich biome
Mountains	4 rock variations	4	Stone-rich, blocks city placement
Water	1 base + 4 animation frames	5	Impassable for marches
Desert	4 sand variations	4	Visual only, no gameplay effect
Snow	4 ice variations	4	Visual only
Edge Transitions	8 per terrain pair	~25	Plains↔Forest, Plains↔Water, etc.

Total: ~50 terrain sprites at 64×64 px

AI Prompt Template (Terrain)

top-down 2d game tile, 64x64 pixel art, [TERRAIN_TYPE], seamless tile, muted earthy palette, fantasy strategy game style, soft lighting, no shadows, transparent edges where applicable, clean geometric forms, slight texture detail, consistent with Tribal Wars / League of Kingdoms aesthetic

Replace [TERRAIN_TYPE] with: lush green grass, dense pine forest, rocky mountain peaks, calm blue water with gentle ripples, golden desert sand, snow-covered tundra, etc.

4. Player Cities & Structures

Player City (4 Visual Tiers)

Each player city occupies a 2×2 area on the map. Castle level determines which of the 4 visual tiers is shown. The city sprite is what other players see when looking at the map.

Tier	Castle Level	Visual Description	Size
Tier 1	L1-5	Small wooden palisade, single watchtower, simple cottages	128×128 px
Tier 2	L6-15	Stone walls, central keep, market stalls visible	128×128 px
Tier 3	L16-25	Larger fortified castle with multiple towers, banners	128×128 px
Tier 4	L26-30	Imposing endgame fortress, dramatic spires, elite aesthetic	128×128 px

Conquest Structures (4 Tiers)

Structure	Count	Size	Visual
C-Shrine	20	256×256 px	Modest stone shrine, faint glow
B-Shrine	12	256×256 px	Larger temple, blue energy aura
A-Shrine	4	256×256 px	Imposing fortress-shrine, golden aura
Congress (S)	1	256×256 px	Massive central pyramid, brilliant divine glow
Alliance Flag (overlay)	—	64×64 px	Banner displayed on captured shrines

AI Prompt Template (Cities)

top-down 2d game asset, 128x128 pixel art, [CITY_DESCRIPTION], fantasy medieval strategy game, isometric-leaning top-down view, transparent background, consistent lighting from upper-left, no players or troops visible, focus on architecture, muted earth tones with [TIER_ACCENT_COLOR] accents

Tier 1: simple wooden palisade settlement, single tower; Tier 4: massive fortified castle with multiple spires, fluttering banners, gold trim; Tier accent colors: T1=brown, T2=grey-stone, T3=blue-banner, T4=gold-and-red.

5. Field Objects (Resource Nodes)

Resource nodes spawn across the map. Each tile is 64×64 px. Use 3 visual tiers per resource type (low/mid/high) and show the level number as an overlay.

Type	Variants	Total Sprites	Visual Theme
Farm (Food)	3 tiers	3	Wheat field, larger fields, golden harvest
Forest (Lumber)	3 tiers	3	Sparse trees, dense forest, ancient woodland
Quarry (Stone)	3 tiers	3	Small pit, active quarry, deep mine entrance
Gold Mine	3 tiers	3	Modest entrance, full-scale mine, fortified mine
GEM Node Lv 1-3	3 levels	3	Glittering crystal cluster, glowing intensity per level

Total: 15 field object sprites at 64×64 px

AI Prompt Template (Field Objects)

top-down 2d game tile, 64x64 pixel art, [OBJECT_DESCRIPTION], natural ground texture below, transparent surrounding edges, muted fantasy palette, slight shadow underneath, no UI elements, no level numbers (added programmatically), single focal element centered

6. Monsters

Monsters need **two sprite versions**: a small map sprite (64×64) for the world view, and a larger battle sprite (256×256 standard, or 384×384 / 512×512 for elites) for the battle report screen.

Monster	Levels	Map Size	Battle Size	Visual Tiers
Orc	Lv 0-10	64×64	256×256	4 tiers (L0-3, 4-6, 7-8, 9-10)
Skeleton	Lv 1-10	64×64	256×256	4 tiers
Golem	Lv 1-10	64×64	256×256	4 tiers
Treasure Goblin	Lv 1-5	64×64	256×256	2 tiers (L1-2, L3-5) + glittering effect
Deathkar	Lv 1-10	64×64	256×256	4 tiers
Green Dragon	Lv 1-3	96×96	384×384	3 levels (color-shift)
Red Dragon	Lv 1-3	96×96	384×384	3 levels
Gold Dragon	Lv 1-3	96×96	384×384	3 levels
Magdar	Lv 1-3	128×128	512×512	3 levels (apex predator)

Total: ~30 map sprites + ~30 battle sprites = ~60 monster sprites

Static Monster AI Prompts

Use these prompts for the still images. Each monster has a distinct visual character. Include the consistent style suffix at the end of every prompt so all monsters look like they belong to the same game.

Style Suffix (append to ALL monster prompts)

, top-down 2d fantasy strategy game sprite, transparent background, soft ambient lighting, painterly style with clean edges, no UI elements, single character centered, consistent with Conquer aesthetic – inspired by League of Kingdoms but distinct

Orc

muscular green-skinned orc warrior, tribal armor with bone fragments, wielding a crude iron axe, fierce snarl, low-tier: smaller and rougher armor, high-tier (Lv 9-10): larger, scarred, ornate war-helm and gold-trimmed shield [STYLE SUFFIX]

Skeleton

undead skeletal warrior, tattered grey cloak, rusted armor pieces clinging to bones, glowing red eye-sockets, holding a notched sword, low-tier: simple bones; high-tier: ornate dark armor and ethereal blue-purple aura [STYLE SUFFIX]

Golem

stone construct, made of jagged grey rock with glowing veins, hulking humanoid form, moss patches on body, low-tier: small and rough; high-tier: massive, intricate runes carved into stone glowing amber [STYLE SUFFIX]

Treasure Goblin

small green goblin with oversized burlap sack overflowing with gold coins and gems, glittering animation cues, mischievous grin, beady eyes, comically large pointed ears, dagger in belt, golden crown askew on head, PRIMARY VISUAL CUE: bag of treasure must be obvious [STYLE SUFFIX]

Deathkar

skeletal undead horse rider, grim reaper aesthetic, tattered black robes trailing behind, scythe weapon, mounted on bone-armored skeletal horse, hollow glowing eyes, ornate crown of bones, dark purple aura [STYLE SUFFIX]

Green Dragon

majestic emerald green dragon, large leathery wings spread wide, iridescent scales, yellow eyes, smoke curling from nostrils, perched on rocky outcrop, Lv 3: even larger, golden horn tips, deeper emerald glow [STYLE SUFFIX]

Red Dragon

fierce crimson red dragon, scales like burning coals, flames flickering around mouth, muscular wings, sharp horns, glowing orange eyes, perched aggressively on stone, Lv 3: imposing, lava cracks visible on scales [STYLE SUFFIX]

Gold Dragon

majestic golden dragon, brilliant metallic scales reflecting light, regal posture, bright blue eyes (contrast with gold), elegant horns, divine aura, Lv 3: glowing brighter, ornate jeweled patterns on scales [STYLE SUFFIX]

Maqdar

apex demonic dragon-king, massive dark obsidian scales with red-glowing fissures, four eyes glowing molten red, multiple sets of horns, two pairs of wings, lava dripping from maw, ancient runic patterns on chest, throne-like rocky perch, Lv 3: visually overwhelming, surrounded by floating embers and ash [STYLE SUFFIX]

7. Monster Animations

Subtle animations bring the map to life without overwhelming the renderer. Each monster has a short looping idle animation (4-8 frames, ~1-2 seconds total). Plus an attack animation for the battle screen (8-12 frames, ~1 second).

Animation Specifications

Animation Type	Frames	Duration	Loop?	Used Where
Idle (map)	4-6 frames	1.5-2s	Yes (loop)	Map view (always visible)
Attack (battle)	8-12 frames	0.8-1.2s	No (one-shot)	Battle report screen
Death (battle)	10-15 frames	1.5s	No (one-shot, final frame stays)	Battle screen on defeat
Special (Boss)	12-20 frames	2-3s	No	Phase transitions for Magdar

Format & Technique

For map sprites (64×64): Use sprite-sheet PNG. Lay out frames horizontally in one row (e.g., 6 frames × 64×64 = 384×64 sprite sheet). The renderer cycles through frames at the specified framerate.

For battle sprites (256×256+): Either sprite sheet OR sequential PNG files (e.g., dragon_attack_01.png through dragon_attack_12.png). Sequential is easier to iterate; sheet is more performant.

Production tools: Aseprite (the industry standard for pixel-art animation, ~\$20), Piskel (free web-based), or Photoshop frame animation. For AI-assisted animation, use Stable Video Diffusion (img2vid) or Runway Gen-3 for short clips, then trace into clean pixel-art frames manually or with image-to-pixel-art conversion.

AI Animation Prompts

These prompts target Stable Video Diffusion, Runway Gen-3, or similar img2vid models. Provide your existing static monster sprite as the reference image, then use the prompt to describe the desired motion. Output should be 1-2 second loops at 8-12 fps.

Universal Motion Suffix (append to all)

, top-down view maintained, static camera, character stays centered, transparent background preserved, looping animation, minimal motion blur, smooth frame transitions

Orc — Idle Animation

subtle breathing rhythm, axe shifts slightly in grip, head turns left to right scanning environment, occasional growl visible (cheek puff), feet planted firmly, tribal beads/teeth on armor swaying gently [MOTION SUFFIX]

Skeleton — Idle Animation

skeleton sways slightly, jaw chatters intermittently, glowing red eye-sockets pulse softly with eerie inner light, tattered cloak ripples in unseen breeze, occasional bone-crack sound visualized as small particle [MOTION SUFFIX]

Golem — Idle Animation

slow heavy breathing – chest rises and falls, glowing rune veins on body pulse rhythmically (slow on/off glow), occasional pebble falls from shoulders, feet remain rooted, slight head turn every loop, moss patches barely visible animated [MOTION SUFFIX]

Treasure Goblin — Idle Animation

GLITTERING coins shifting in bag (sparkle particles), goblin nervously glances side-to-side, fidgets with crown sliding off head, dagger taps against belt, occasional manic giggle visualized as quick jaw movement, primary motion cue: SPARKLES from treasure bag [MOTION SUFFIX]

Treasure Goblin — Attack/Flee Animation

panic-flee animation: goblin grips bag tighter, eyes widen, prepares to dash, treasure spills slightly creating coin-puff effect, used when player engages – telegraphs the 30-minute despawn risk [MOTION SUFFIX]

Deathkar — Idle Animation

skeletal horse paws ground slowly, rider raises and lowers scythe rhythmically (menacing slow swing), dark purple aura pulses around figure, tattered cloak billows ominously, hollow eyes flicker like dying candles [MOTION SUFFIX]

Green Dragon — Idle Animation

wings furled but flexing slightly, tail swishes lazy figure-8 pattern, smoke curls rhythmically from nostrils, eyes blink slowly, scales catch light with subtle iridescent shimmer, claws flex on rocky perch [MOTION SUFFIX]

Red Dragon — Idle Animation

small flame plumes from mouth at intervals (every 2 seconds), wings shift in agitation, scales glow brighter with each breath (heat-up/cool-down pulse), tail lashes more aggressively than green dragon, embers float up around it [MOTION SUFFIX]

Gold Dragon — Idle Animation

golden scales reflect shifting light (rotating shimmer effect), eyes glow steadily, wings unfurl to half-position then refold (regal display), tail curls and uncurls, occasional flash of divine light from chest cavity [MOTION SUFFIX]

Maqdar — Idle Animation (BOSS)

MASSIVE PRESENCE: lava cracks pulse with molten orange glow throughout body, all four eyes blink asynchronously creating unsettling effect, both wing pairs flex and spread (showing size), embers and ash float upward continuously, ground beneath shows small tremor effects, occasional ROAR animation (jaw opens wide, screen-shake hint) [MOTION SUFFIX]

Maqdar — Attack Animation (BOSS)

massive wing-beat backwards for momentum, charges forward, head rears back, fire breathes forth in dramatic plume, screen shake on impact frame, 8-12 frames at 12 fps, leaves residual ember particles [MOTION SUFFIX]

Key Animation Guidelines

Rule	Reason
Subtle motion only on map	Player sees 30+ monsters at once; large motion = visual chaos
Loop must be seamless	First and last frame must blend perfectly; otherwise visible 'pop'
Character stays centered	Monster occupies 1 tile — wandering animation breaks tile alignment
No background changes	Background is the terrain layer — monster sprite must have transparent background
Battle animations can be larger	Battle screen is full-attention focus; movement can be dramatic
Reuse base poses	All Orc levels share the same idle animation; just retex the static frame

8. Troops, Treasures, Charms & UI

Troop Sprites (Battle View)

Troops appear in battle reports only — no map sprites needed (marches show as movement indicator, not individual troops).

Type	Tier 1	Tier 2	Tier 3	Tier 4	Tier 5
Infantry	Fighter	Warrior	Knight	Guardian	Crusader
Ranged	Hunter	Longbow Man	Ranger	Crossbow Man	Sniper
Cavalry	Stableman	Horseman	Heavy Cav	Iron Cav	Dragoon

15 troop sprites at 128×128 px each. Higher tier = better armor, more detail, higher-quality weapons. Tier 5 (Crusader, Sniper, Dragoon) should look elite/legendary.

AI Prompt Template (Troops)

```
fantasy [TROOP_TYPE] [TIER_DESCRIPTION], 2d game character sprite, 128x128 px, front-facing combat pose, weapon raised, transparent background, painterly style with clean lines, single character centered, soft ambient lighting from upper-left, [ARMOR_QUALITY] armor, [DETAIL_LEVEL] detail
```

Example for Crusader (Inf T5): 'fantasy infantry knight in elite armor, ornate plate with gold trim and crusader insignia, wielding glowing two-handed sword, dramatic pose, noble stance, legendary tier' + style.

Treasure Sprites

Grade	Count	Color Theme	Frame Style
Normal	14	Grey / silver-tone	Plain border
Rare	15	Blue / azure	Subtle blue glow
Epic	26	Violet / purple	Magenta aura
Legendary	16	Gold / amber	Golden flames
Mythic	6	Turquoise / radiant	Multi-colored brilliance

Total: 77 unique treasure sprites + 5 frame overlays at 128×128 px. Each treasure depicts the item itself (e.g., 'Magic Plow' shows a glowing plow). Frame overlays sit on top of treasure images and indicate grade.

Charm Sprites

Charms are temporary stat-boost items. **24 designs total: 8 stat categories × 3 grades.** All 96×96 px.

Stat Category	Visual Theme
Construction Speed	Hammer + gear icon
Research Speed	Open book + glowing rune
Troops HP	Heart shield
Troops Attack	Crossed swords

Troops Defense	Tower shield
Carry Capacity	Loaded saddlebag
March Speed	Winged boot / arrow
Gathering Speed	Sickle / harvest tool

9. UI Icons & Elements

User interface icons. These are the most-used assets — production should prioritize consistency over individuality. All UI icons share the same drawing style: clean, easily readable at small sizes.

Category	Items	Sizes	Total
Resources	Food, Lumber, Stone, Gold, GEMS	32×32 + 64×64 px	10
Speedups	Build / Research / Train / Recover / Generic	64×64 px	5
Action Buttons	Build, Research, Train, Attack, Spy, Gather, Rally, Heal, Trade	64×64 px	~20
March Type Icons	Gather / Attack / Support / Rally / Spy	48×48 px	5
Buff Icons	Production, Anti-Recon, Active Buffs	48×48 px	~15
Notification Icons	Battle Report, Spy Report, Mail, Alliance Help	32×32 px	~10
VIP Crowns	Levels 1-20 (or 4 tier-crowns)	64×64 px	4 (tiered) or 20 (per-level)
Avatar Frames	Default + 4 unlockable	96×96 px	5

Total UI Icons: ~85 items

Buildings (Phase 2 City View)

MVP uses a list-based building view (cards with name, level, upgrade button). The full illustrated city view is Phase 2 polish work.

Building	Tier 1 (L1-7)	Tier 2 (L8-15)	Tier 3 (L16-23)	Tier 4 (L24-30)
Castle	Wooden keep	Stone keep	Fortified castle	Endgame fortress
Wall	Wooden palisade	Stone wall	Reinforced battlements	Ornate fortifications
Farm	Small plot	Multi-field farm	Industrial farm	Magical bountiful farm
Lumber Camp	Single shed	Lumber yard	Logging operation	Mystical sawmill
Quarry	Open pit	Active quarry	Deep mine	Subterranean complex
Gold Mine	Mine entrance	Active gold mine	Industrial mine	Treasure vault
Storage	Wooden silo	Stone storehouse	Multi-warehouse	Crystal vault
Treasure House	Modest vault	Stone treasury	Ornate hall	Royal treasury
Barrack	Tents	Stone barracks	Training grounds	Royal academy
Hospital	Tent infirmary	Stone hospital	Healing temple	Magical sanctuary
Academy	Wooden lab	Library	University	Arcane spire
Trading Post	Market stall	Trading hall	Caravan center	Grand bazaar
Hall of Alliance	Meeting tent	Stone hall	Diplomatic center	Royal court

Total: 13 × 4 = 52 building sprites at 192×192 px (Phase 2)

10. Production Summary

Category	Sprites	Phase	Est. Hours (Solo Designer)
Terrain (with transitions)	~50	MVP	30-50h
Player Cities (4 tiers)	4	MVP	8-15h
Conquest Structures	5	MVP	10-15h
Field Objects (3 tiers each)	15	MVP	15-25h
Monsters (Map + Battle)	60	MVP	60-100h
Monster Animations	~30 idle + 10 attack	MVP	40-80h
Troops (battle)	15	Phase 2	30-50h
Treasures	82	MVP	60-100h
Charms	24 + 3 frames	MVP	20-30h
UI Icons	~85	MVP	25-40h
Buildings (City View)	52	Phase 2	50-80h
Castle Skins (cosmetic)	5-10	Phase 4	10-30h

MVP Subtotal: ~330 sprites — approximately 230-375 designer hours

Phase 2 Add: +110 sprites — additional 80-130 hours

Phase 4 Add: +5-10 sprites — additional 10-30 hours

Production Tips

Tip	Reasoning
Style guide first	Make 5 sample sprites (1 terrain, 1 city, 1 monster, 1 building, 1 UI icon). Confirm visual style before s
Limited color palette	Maximum 32 colors for the entire game. Tribal Wars uses ~24. This makes the world cohesive AND sa
Free starting points	Kenney.nl (CC0 strategy sprites), OpenGameArt.org, itch.io asset store (\$5-20 packs). Replace gradu
AI as sketch tool	Midjourney/Stable Diffusion for first drafts, then clean up manually. Saves 60-70% of initial work. Don't
Sprite sheets	After production, pack into texture atlases (TexturePacker, Free-Tex-Packer). Reduces 330 HTTP req
Iterate per category	Build 1 terrain set fully. See it on the map. Adjust style. THEN do monsters. Don't generate 330 sprites

Naming Conventions

Element	Pattern	Example
Terrain	[type]_[variant].png	plains_01.png
Terrain transition	[type]_to_[type]_[direction].png	plains_to_forest_n.png
City	city_tier[1-4].png	city_tier3.png
Monster Map	[name]_t[1-4].png	orc_t2.png
Monster Battle	[name]_battle_t[1-4].png	magdar_battle_t3.png
Animation Sheet	[name]_[anim]_sheet.png	dragon_idle_sheet.png
Treasure	treasure_[grade]_[name].png	treasure_legendary_dragon_horn.png
Charm	charm_[stat]_[grade].png	charm_construction_legendary.png
UI	ui_[category]_[name].png	ui_resource_food_64.png

12. Final Notes

Sprint 0 Asset Plan (the bare minimum to get started)

Asset	Why it's first	Time
6 base terrain tiles	Map renders with placeholder colors otherwise	8-15h
1 player city (Tier 1)	Player can see their own city	3-5h
1 monster (Orc T1)	Map has something to fight	2-4h
10 UI icons (resources, basic actions)	Game is interactable	5-8h
10 sample treasures (mixed grades)	Treasure system testable	5-10h

Sprint 0 total: ~25-40 hours = playable prototype

From there, expand category by category. Don't try to ship the whole asset set before launching MVP. Players forgive placeholder art if the gameplay loop is solid. They never forgive bad gameplay even with stunning art.
